The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins have glycosyltransferase activities (Cps1E, Cps1G, Cps1I, Cps1J, Cps1K) and CP polymerase activities (Cps1H). The capsular confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals, e.g. against S. suis in pigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid containing the suis, used for serotype-specific mutants for vaccination.

                                                                                                      The present sequence represents the capsular gene cluster of Streptococcus suis serotype 2. The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins are involved in regulation (CpsA), chain length determination (CpsB, CpsC), export (CpsC), and biosynthesis (CpsE, CpsE, CpsC, CpsH, CpsJ, CpsK). The capsule confers bacterium resistance to complement mediated opsomophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals.

The operon is useful for producing chimeric eps operons, for optimising production of EPS in lactic acid bacteria. EPS impart texture, mouth feel and rheological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel strain of a lactic acid bacterium that contains at least one of 8 specific nucleic acid sequences all of which are defined in the specification. The bacterium of the invention may be useful during food preparation, particularly that of beverages and meat, cereal, or dairy products e.g. fermented milk, yoghurt, 'matured' cream, dessert cream, cheese, soft cheese, cheese spreads, cottage cheese, milk based drinks, dairy product retentates and baby milk, where the products are derived from an animal and/or plant. The current sequence is that of the streptococcus thermophilus CNCM I-2380 polysaccharide synthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New strain of lactic acid bacteria, useful for preparation of foods and pharmaceuticals, especially fermented dairy products, contains genes involved in polysaccharide biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-MAR-2003; 2003FR-00003242

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC Streptococcus byogenes), comprising one of 5483 sequences (S1), given in CC the specification. The proteins have antibacterial and antiinflammatory CC activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and CC antibodies that bind (I) are used in the manufacture of medicaments for CC the treatment or prevention of infection or disease caused by CC Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. CC Nucleic acids encoding (I) are used to detect Streptococcus in a CC biological sample. (I) is used to determine whether a compound binds to CC (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by CC used as a vaccine or diagnostic composition. The disease caused by CC acid encoding (I) are used to recombinately produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity CC chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc nucleotide sequences (I; ADV78860-ADV718998 and ADV81341-ADV83476) and covel polypeptides (II; ADV78999-ADV81203 and ADV81205-ADV81340). The curvel polypeptides encode polypeptides of S. agalactiae involved in the cc synthesis of amino acids, cell membranes, intermediate (central) comerabolism, energetic metabolism, fatty acid and phospholipid metabolism, cc metabolism, replication, transcription, translation, protein cc regulatory functions, replication, transcription, translation, protein cc transport, adaptation to atypical conditions, sensitivity to medicines cand/or analogues, functions related to transposons, biosynthesis of cc and/or analogues, functions related to transposons, biosynthesis of cc and/or analogues, and transcription comprising (I) are useful for the detection and/or amplification committee acids. Pharmaceutical composition comprising (I) are complete cuseful for treatment of a bacterial S. agalactiae infection. The complete compone of Streptococcus agalactiae is given in ADV81204. Note: The present patent is an equivalent for the basic patent FR2824074A1, which

The method is useful for preparing a composition for serotyping and/or subtyping a GBS bacterium for diagnosing GBS infections in pregnant women, elderly and/or immunocompromised patients. The present sequence is that of a consensus DNA sequence for the 3' end of the cpsD-cpsE-cpsF and the 5' end of the cpsG sequences of group B Streptococci which is related to the method of the fine immunocompromise of group B Streptococci which is related to the method of

The galactose-containing gluside is used as a candidate for infection preventors. This sequence represents DNA encoding betal,3-galactose transferase proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Betal,3-galactose transferase and a DNA encoding the enzyme, a protein having betal,3-galactose transferase activity, a transformant, preparation of a protein, and preparation of a galactose-containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     activity, derived from a microbe having an activity of transferring galactose to N-acetylglucosamine by betal,3-bond. The protein can be in a method for the preparation of a protein having betal,3-galactose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 1; Page 15-22;

CC superantigen and the mono- or diglycosylceramide is capable of eliciting CC an antitumor immune response in a mammal into which the cell is C introduced; (2) treating a tumor or neoplastic disease in a subject; (3) CC cells useful to treat a tumor or neoplastic disease in a subject; (4) an CC cells useful to treat a tumor or neoplastic disease in a subject; (4) an CC cells useful to treat a tumor or neoplastic disease in a subject; (4) an CC apoptatic disease in a subject, comprising a cell population that has been transfected with naked DNA encoding superantigen, and treated to CC undergo apoptosis or lysis; and (5) a cell that has ingested or been CC transfected with the above apoptotic preparation or lysate, thus, CC rendering the cell effective in presenting material expressed from CC transfecting nucleic acid or material ingested to the immune system of a CC mammal to elicit an anti-tumor immune response. The composition and CC methods are useful for treating tumors or neoplastic diseases. The CC used in an example from the present invention. Note - The sequence data CC for this patent is not represented in the printed specification, but was CC obtained in electronic format directly from the USPTO web site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New composition for treating a tumor or neoplastic disease in a subject comprises conjugates comprising superantigen polypeptides or nucleic acids with other molecules that produce a tumoricidal response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    exogenous nucleic acid encoding a superantigen expressed in the which cell also produces or expresses all alpha-anomers of mononly-newloars and alpha-anomers of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a composition for treating a tumor or neoplastic disease in a subject. Also described: (1) a mammalian cell comprising an exogenous nucleic acid encoding a superantigen expressed in the cell,

The invention is useful for detecting agalactiae in a sample. The present sequence is S. agalactiae cps gene This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         misc_binding
                                                                                    Glaser

pyrimidines and/or nucleosides, regulatory functions, replication, transcription, translation, protein transport, adaptation to atypical conditions, sensitivity to medicines and/or analogues, functions related to transposons, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery. (I) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for treatment of a bacterial S. agalactiae infection. Note: WO200292818A2 is equivalent for the present basic patent FR2824074A1. WO200292818A2 contains 6617 sequence whereas the present patent only contains 2344 nucleotide sequences (1; ADV87607-ADV87745) and novel polypeptides (II; ADV87746-ADV89950). The nucleotide sequences encode polypeptides of S. agalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, fatty acid and The present invention relates to novel Streptococcus agalactiae nucleotide sequences (I; ADV87607-ADV87745) and novel polypepti phospholipid metabolism, nucleotide metabolism including purines.

Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips and identification of therapeutic targets.

Claim 1; SEQ ID NO 135; 439pp; French

The present invention relates to novel Streptococcus agalactiae nucleotide sequences (I; ADV78860-ADV78998 and ADV83341-ADV85476) novel polypeptides (II; ADV78999-ADV81203 and ADV81205-ADV83340). novel polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nucleotide sequences encode polypeptides of S. agalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, fatty acid and phospholipid metabolism, nucleotide metabolism including purines, pyrimidines and/or nucleosides, regulatory functions, replication, transcription, translation, protein transport, adaptation to atypical conditions, sensitivity to medicines and/or analogues, functions related to transposons, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery. (I) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for treatment of a bacterial S. agalactiae infection. The complete genome of Streptococcus agalactiae is given in ADV81204. Note: The present patent is an equivalent for the basic patent PR2824074A1, which

F2, F3, and F4 lines of Aquilegia formosa X A. pubescens were grown from seed in greenhouses at UC Santa Barbara.
From these plants three sets of tissue were collected: 1)
Small flower buds (<10 mm) and very young inflorescences (71 & 29% by weight respectively), 2) Medium (7-20 mm) and large (at or near anthesis) flower buds (65 & 35% by weight respectively) and 3) Shoot apical meristems. A fourth set of tissue was collected from seed in sand and at approximately 1 month root tissue and leaf tissue of various developmental stages were collected (84 & 16% by weight respectively). Total RNA was extracted from each set of tissue and pooled in the following proportions:
1.5x from sets 1 & 2, 1x from sets 3 & 4. From the pooled total RNA, mRNA was extracted and enriched for full-length the respectation of the respectively.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5, and adaptace of the primer and the primer and the prepared by using trehalose thermo-activated reverse prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 50.0. Second strand cDNA was prepared with the primer adapter of sequence [5, GAGAGAGAGATTAATTAATTAATCCCCCCCCCCC 3']. cDNA was cloned into the XhoI and BamHI sites. Vector: a modified pBluescript KS(+) after bulk excision from Lambda and the control of the primer adapter of the primer adapter of sequence [5].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 placenta and extra embryonic tissue"

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score
